

AC withstand voltage standard for tubular busbars

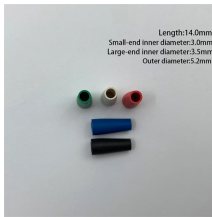

Overview

The IEC 61439 standard applies to busbar assemblies that will be installed in electrical applications with a voltage rating up to 1000 V (for AC) and 1500 V (for DC). This standard defines the design verification, test requirements, and thermal performance of the assemblies. They represent indispensable principles that modern power system engineers must thoroughly. The maximum current for each tab or termination must be considered to avoid hot spots. 4) is equal to conductor thickness (t) multiplied by conductor width (w). A value of approximately 400 circular mils. The purpose of this document is to detail the requirements of Northern Powergrid in relation to the tubular busbar systems and associated fittings detailed within this document. The International Electrotechnical Commission (IEC) issues globally accepted.
