

After the original terminal box was replaced with a fiber optic trolley

Overview

After mounting the distribution box, it's time to connect the fiber optic cables. Terminate the fibers using the appropriate connectors and splice them together if necessary. What do we mean by the “installation process?”

” Assuming the design is completed, we're looking at the process of physically installing and completing the network, turning the design. A fiber termination box is the standard instrument used in fiber optic networks to connect, secure, and protect optical fibers at the terminating point. Good quality fiber laying and termination systems help achieve minimal back reflection and low signal loss. Covers mounting, splicing, routing, labeling, and testing for indoor/outdoor use.
