

## Core switch board stuck

### Overview

It's one of two options to open the path to the end. On your first playthrough, you've probably went to the left and solved the little shooter puzzle. I solved the puzzle on the left path and fought the monsters in the northern path, but when I find myself in front of this switch <https://imgur>. Did you ever find in this. On my working HAC-20 board i get a. Generally. Currently this is where I stand, I have attempted to reset the switch which is an ICX7150 48p about 15 times now. I have attempted to console into. This was part of our core switches and the OS or Firmware was updated almost a year ago and on reboot it is now stuck in this boot-loop. They replaced the core switches with.

## Core switch board stuck

You can disable the forcefield in the CORE by either solving the puzzle (Sage's Path) or battling monsters and flipping the switch you showed in your post (Warrior's Path).

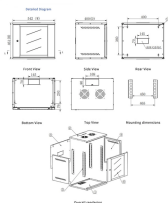

This was part of our core switches and the OS or Firmware was updated almost a year ago and on reboot it is now stuck in this boot-loop. I've tried multiple serial connectors as well as the ...

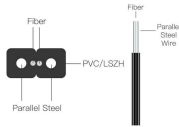

So, I have done a lot of reading on the forums to "self help" but still having issues with my switch. Currently this is where I stand, I have attempted to reset the switch which is an ICX7150 48p ...

Guys I'm stuck in the core. I solved the puzzle on the left path and fought the monsters in the northern path, but when I find myself in front of...

Judging from the behavior of my working board, it feels like 77620 is getting stuck on when it should be shutdown, but from what? Is there anything I can do to further diagnose what could ...

Ask here for tips and tricks about this chapter. Tell where you're stuck and others will give the solutions. (Please keep always on topic. Don't post about other chapters or create random chit-chat here)

We're facing an issue on core switch nexus 9504 S/N: FOX2148PHMM PN:800-41485-01L0 and PID: N9K-C9504. That one of the power supplies did not work. So we need your support ...

That switch disables the force-field which was blocking the eastern path near the save point; it doesn't do anything in the northern room itself.

If it's a unpatched switch, you might be able to dump console-specific files and try to restore it with homebrew. I've never done this myself, but in theory a nand backup from another switch with the ...

Switch contact welding is caused by high inrush current at switch-on. In power supplies the high inrush current is caused by charging capacitors. You would need to select a switch or a ...
