

Distribution box cold bending mill

Distribution box cold bending mill

This production line is equipment for production of distribution boxes. The strip coil to be processed is manually placed on the uncoiler, and then corrected and tensioned.

It includes parameters for materials, forming capabilities, speed, and quality, along with a description of the production line's components and layout.

The Sundwig 4-high mill is equipped with positive and negative work roll bending in order to influence the shape and the flatness of the strip. Either the work roll or the back-up roll is driven, depending on ...

The cold rolling mill is used to pass hot-rolled coils produced from the hot rolling mill between two rotating rolls and produce products of the desired thickness.

Top and bottom roll chocks are shifted in the Mae West blocks by hydraulic cylinders mounted on the drive side of mill housing. Top and bottom Intermediate Rolls can be shifted in opposite directions to ...

The whole roller system is a box structure, which can be quickly pulled out and pushed in from the main body of the machine. The structure of the roller change frame is simple, and it is easy, fast, stable ...

Product Description Machinery for production electronic Sheet metal box roll forming machine for distribution board & modular box making. Equipment for outdoor/indoor distribution panel formed ...

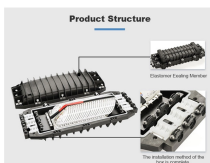

Contact us today regarding your roll forming and coil processing needs! Bradbury Group manufactures equipment solutions for all roll forming machines, complete rollforming lines, and coil ...

With experience from over 800 cold rolling projects ABB has the in-depth knowledge, skills and offerings required to design and implement solutions that allow for tangible, long-term process ...

With proper machine selection, tooling design and process control, cold bending roll forming offers and efficient fabrication solution for mass producing formed sheet metal components.

The whole roller system is a box structure, which can be quickly pulled out and pushed in from the main body of the machine. The structure of the roller change ...
