

How to configure a network aggregation switch

Overview

Configuring port aggregation on a UniFi switch is straightforward using the UniFi Network Controller (or UniFi OS Console). LACP (Link Aggregation Control Protocol): LACP is an industry-standard protocol (802.3ad) that dynamically manages link aggregation, provides automatic failover, and helps prevent misconfigurations by ensuring both ends of the link agree on the aggregation settings. Ideally, those switches will be connected to each other, allowing for connectivity between devices. Here's how it works step-by-step: Port Bundling: Two or more Ethernet ports are "bundled" into a single logical port. Redundancy: If one link fails, traffic.
