

Intelligent Integrated Wiring Boxes for Dutch Islands

Overview

Using a broad range of materials and products designed for durability and ease of installation and maintenance, IBOCO has developed a wiring duct system that organizes, retains, separates, identifies, and handles even the toughest panel wiring challenges. Compatible with various well-known brands of solenoid valves, including AirTAC, FESTO, SMC, and CKD, providing users with a rich selection space to meet brand preferences and performance requirements in different application scenarios. Diverse Manifold Position Options for Flexible Configuration. We are here for you! Integrated Wiring System (Premises Distribution System) is a full name "Building and Building Group Integrated Wiring System". According to EIA / TIA 568 standard, the building integrated wiring system consists of six independent subsystems: * work Symmers (user terminal): Connected by the terminal. As control panels grow increasingly complex and crowded, schedules get tighter and budgets shrink, more and

more system integrators and engineers are realizing the advantages of IBOCO's innovative wire management system. Our large range of smart and flexible products meet any power challenge and can be configured in detail to meet the needs of the most demanding customers. They seamlessly switch over from.
