

# LC interface single-core or dual-core

## Overview

Single LC connectors (also known as Simplex) are typically used for BiDi (BiDirectional) optics. Fiber optic connectors serve as the interface between optical fibers, facilitating the seamless transmission of data. Additionally, fiber optics are available in different types such as single-mode and. Among all connector types that drive today's high-speed networks, the LC connector has emerged as the most widely adopted small form factor (SFF) interface. In this beginner-friendly guide, we'll dive deep into LC connector types, exploring their. In BiDi transceivers, wavelength division multiplexing (WDM) is utilized to send and receive signals using two wavelengths (for instance, the space between 1310 nm and 1550 nm) on a single fiber, which consequently contributes to a 50% reduction in fiber usage. The following text gives a detailed introduction of LC connector.
