

## Methods for Remote Bridging of Fiber Optic Routers

### Overview

**Wired Option:** Traditionally, Ethernet or fiber-optic cables have been used to connect buildings. **Wireless Option:** If cabling is not feasible, you can opt for a 2.8GHz wireless bridge, which eliminates the need for cables while still providing a reliable connection between. Router bridging is a technique used to connect two or more network segments together, creating a single, unified network. This is particularly useful in scenarios where you need to extend your network to areas that are out of range of your primary router, such as different floors in a building or. In the world of fiber optics, the Optical Network Unit (ONU) - often called a fiber modem - is your gateway to the internet. By default, most ONUs operate in Router Mode. This means they act as a multi-tasking maestro: converting the fiber optic signal, routing traffic, managing a firewall, and. A wireless bridge connects two routers over Wi-Fi, letting devices share one internet connection without long Ethernet cables. Determine the required network speed.
