

Proportion of optical modules in optical communication

Overview

This indicator is critical to evaluating the performance of optical modules because it directly affects the transmission distance, signal quality, and service life of optical modules. Operating at the physical layer of the OSI model, optical modules are core devices in optical. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. An. ong-haul coherent optical communications systems.
