

Reasons for the cutting of the West Asian communication fiber optic cable

Overview

Undersea cable cuts in the Red Sea have disrupted internet access in parts of Asia and West Asia, impacting connectivity in India, Pakistan, and Kuwait. The disruptions, affecting major cable systems like SMW4 and IMEWE, have led to increased latency and slower internet speeds for users in the UAE. Japan, South Korea and the island of Taiwan are connected to the US with large data cables running across the bottom of the Pacific Ocean. These cables carry a significant amount of data. It rapaciously extracted from its surroundings and unsurprisingly came up against challenges from the very environment it sought to change. 1 Still, the Batavia-Singapore telegraphic line and its contemporaries persisted, paving the way for the global fiber-optic communication cables that we take. Multimillion-dollar undersea/subsea fiber optic cable projects have become the latest focal point of geopolitical tensions in Asia as China intensifies its highly contested claims over the South China Sea, writes Nikkei Asia's Singapore correspondent Tsubasa Suruga. It argues that US-China competition is resulting in a fragmentation of cable.
