

Synchronous Motor Relay Protection Detection

Overview

Protect asynchronous (induction) and synchronous motors with one SEL-710-5 Motor Protection Relay. Features include broken rotor bar detection and variable-frequency drive (VFD) support as well as options for arc-flash detection (AFD), differential protection, and synchronous motor protection. The Eaton's Motor Relays (EMR3MP0, EMR3000, EMR4000 and EMR5000) provide unparalleled motor protection. These relays are most commonly applied to medium-voltage or larger motors. Users appreciate the multiple protection functions, which include zone-selective interlocking and programmable logic. Motor protection is used to prevent damage to the electrical motor, such as internal faults in the motor. The field excitation panel receives dedicated speed signals and rotor monitoring signals for enhanced excitation control. The Exciter Panel's control and 869's Protection and SEL-710-5 Motor Protection Relay Synchronous Motor Protection, Broken Rotor Bar Detection, and Arc-Flash Detection Major Features and Benefits The SEL-710-5 Motor Protection Relay provides an exceptional combination of protection, monitoring, control, and communication in an industrial package.

Synchronous Motor Relay Protection Detection

Synchronous Motor Excitation, Protection, and Control diagram is shown below in Fig. 1. The field excitation panel receives dedicated speed signals and rotor monitoring signals

Explore the SEL-710-5 Motor Protection Relay data sheet for synchronous motor protection, arc-flash detection, and control features.

The protection relays provide main protection for synchronous and asynchronous motors. They can be used for circuit-breaker and contactor-controlled motors in a variety of drive applications, such as, ...

The SEL-849 provides current, voltage, and thermal-based protection, arc-flash detection, and power metering for motor protection applications.

The P24x line of motor protection relays, part of the MiCOM P40 Agile family of protection relays, offer comprehensive protection, control, and monitoring for large induction and synchronous motors.

Relay phase reversal protection detects motor phase rotation and trips after a delay if phase rotation is incorrect. The SEL-710-5 provides this protection even if phase voltages are not available.
