

The optical distribution box wiring is very messy

Overview

Identify common issues like high loss, dirty connectors, and signal drops, with practical solutions for optical links. The optical fiber distribution box allows people to easily access the optical fibers in the box, and can well protect the optical fibers. However, because optical fibers are fragile and can be easily damaged, Leviton is not responsible for defects or damages resulting from non-compliant or improper design, installation, use, repair or alterations, misuse, neglect, accident or abuse of this product. This guide will walk you through diagnosing and resolving common issues. It is designed for either pre-connectorized cables or field splicing of Pigtails. The offered ODB's /OSB's are ideal for building entrance terminals, telecommunication closets, computer rooms & other controlled environments. It is designed for either pre-connectorized cables or field splicing of Pigtails. Outer Dimensions: 390H x 340W x 165D. Designed and produced according to the communication industry standard YD/T 2150-2010, it integrates the introduction of optical cable (fixing, peeling, protection), optical fiber fusion, and wiring, and independently completes the optical fiber wiring management function.
