

## The optical module is gone

### Ordering information

NO.	1	2	3	4	5	6
Model	SF12M1	SF24M2	SF48M4	SF6M1	SF12M2	SF24M4
Product name	Patch Panel	Patch Panel	Patch Panel	Patch Panel	Patch Panel	Patch Panel
Illustration						
HU	1	2	4	1	2	4
Maximum number of cores	144	288	576	144	288	576
Product size (excluding modules and adapters)	482.6*371.1*44 mm	482.6*371.1*88.1 mm	482.6*371.1*177 mm	482.6*371.1*44 mm	482.6*371.1*88.1 mm	482.6*371.1*177 mm
Standard color code	RAL9005	RAL9005	RAL9005	RAL9005	RAL9005	RAL9005

## Overview

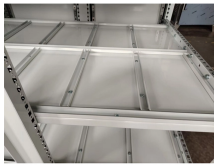

The current version of the switch does not support your optical module, and a version update is required. If the optical module is installed on a GE port, run the display interface GigabitEthernet x/x/x command to view port information when the optical module. This article will introduce the common issues in use and the corresponding solutions, such as: unsupported transceiver, SFP modules not detected, CRC error, invalid error detected, link flap, SFP unqualified etc. When you found the following. An optical module is a critical component in modern optical communication systems, directly affecting transmission stability, network reliability, and operational efficiency. However, during installation and daily operation, various issues may arise. Therefore, understanding common optical module. Customers in the use of optical modules will more or less encounter a variety of failure problems, such as optical module model selection is correct, the use of jumper is correct and some common problems, customers have the ability to judge and have a clear solution, but for some of the use of. If your optical module isn't working properly, how to find and fix the problem?

We list 5 main issues to help locate and repair network faults!.

## The optical module is gone

If your optical module isn't working properly, how to find and fix the problem? We list 5 main issues to help locate and repair network faults!

The main causes of optical module failure are performance degradation due to ESD (Electrostatic Discharge) damage, and optical link disconnection caused by ...

The main causes of optical module failure are performance degradation due to ESD (Electrostatic Discharge) damage, and optical link disconnection caused by contamination or damage to the optical ...

Based on typical issues encountered with optical modules in daily switch applications, this document summarizes basic troubleshooting steps for resolving common faults:

Sometimes the optical module is replaced by an electrical interface module that implements either an active or passive electrical connection to the outside world.

Generally, there are two situations, one is the quality of the cable, and the second is the quality of your optical module. Both of these situations can be resolved by replacing the product.

optical module troubleshooting guide covering common faults, compatibility issues, optical link failures, ESD risks, and practical solutions.

If the optical module is faulty, replace it with the spare part. If the fault is caused by the configuration or environment, advise the customer to optimize the configuration or environment.

In this article, we will focus on teaching you how to troubleshoot and solve the common three categories of optical module failure. First, the transmission class of the optical module fault ...

What happened to the failure of the optical module, and how to judge the failure of the optical module. The failure of the optical module function is divided into the failure of the transmitting ...

When the optical port of the optical module is up or down frequently, first confirm whether the optical module is abnormal. Check the alarm information of the optical module to check the ...
