

View the MAC address of the core switch

View the MAC address of the core switch

The mac table on the core will only contain addresses layer 2 adjacent through the core switch and show on the interface from core to the access switch where the device is located.

To view the MAC address for a given routing switch, execute the show system-information command in the CLI.

Locating a device's MAC address on a Cisco switch port is a fundamental skill for network administrators. Whether you're enforcing security measures, troubleshooting an issue, or tracking ...

Understand how to manage MAC addresses on your network switch. Easy steps for finding, adding, and deleting MAC addresses to improve security and efficiency.

To find the MAC Address on a Cisco switch port, we use the command show mac-address-table. Let's understand the step by step process under different scenarios.

Connect to the Switch/Router by using a console cable or a terminal emulator like Putty or Secure CRT. If you are successful it should look something like this.

Objectives Part 1: Build and Configure the Network
Part 2: Examine the Switch MAC Address Table
Background / Scenario The purpose of a Layer 2 ...

That tells you, it is the Access switch 1 that is connected to Te1/1 and not the device itself. Now, log onto the Access switch and do a "show mac-address-table" command for the MAC address and that ...

This command will tell you which port the MAC address is associated with on the switch. If it points to an uplink port, move to the next switch in the path and repeat the command.

You can check the MAC addresses stored by a Cisco switch by logging into the switch and issuing the command show mac address-table. The addresses are stored in a table called the ...
