

# What is pigtail fabric placement

## Overview

The pigtail catheter (PC) is a safe, reliable, less invasive, and less morbid alternative to traditional chest tubes. 7% in the treatment of spontaneous pneumothorax, this long and flexible tube with a coiled end is considered the cornerstone for draining. Small-bore chest tubes – also referred to as pigtail catheters – are being used to relieve both spontaneous and in some cases, traumatic pneumothorax. These pigtails are placed with a Seldinger catheter-over-wire technique very similar to the central venous catheter insertion. Advantages of the Pigtail Catheter Placement from EM Cases Summit In each EM Cases Summit video you'll get a taste of the awesomeness of EM Cases Summit. PEARL # 1 – LOCATION/LANDMARK: Minimize skin to pleural distance. Apply negative aspiration force and aspirate until bubbles visualized in chamber Step 2: Advance introducer needle at second intercostal space in midclavicular line.
