It refers to the wiring that carries low voltage AC power from the main electrical panel to various devices and components throughout a building. This type of wiring is commonly used for lighting, heating, and cooling systems, as well as for low voltage devices such as thermostats, doorbells, and. Low voltage wiring refers to insulated wire with non-metallic sheathing that transmits 50 volts or less of electricity. Standard power outlets in the United States and Canada carry 120V, and most lighting fixtures, electronics, and devices draw up to 120V. Most of these systems operate at 24 volts AC or D and are designed for safety, efficiency and control. Despite their lower power levels, improper installation or misunderstanding how they function can lead
